MOHAMAD SHAMIL SHUKRI BIN MOHD SULASTRY

Hi

I'm Shamil. For the past 4 + years, I have developed and refined my craft at various boutique architecture firms. Throughout these experiences, I have demonstrated the ability to solve problems creatively, learn new skills and adapt to different environments. I take challenges in stride and see them as contributions to the development of my creative horizons.

MS Word / Excel

SKILLS
Sketching
Wireframing
Prototyping
User Flows

TRANSFERABLE SKILLS

Similar design methodology

All projects were subject to heavy sketching and iteration process revolving around client / user needs. Lots of back and forth with client / consultants to arrive at final design.

Sound understanding of design principles

I was trained to make sure designs were adhereing to principles such as Gestalt which are applicable in both architecture as well as UI / UX.

Attention to detail

As architects, our job scope covers the whole design and construction process. In addition to making sure every component has a consistent design language, the architects role as a project manager is essential in making sure the project runs smoothly. Every single detail has to be considered.

Interpersonal skills

Having handled projects on my own, I have regularly attend meetings and liase with clients / consultants, developing my soft skills in the process.

Problem solving skills

I have been expected to resolve problems on my own and forced to devise solutions sometimes in stressful and urgent situations.

WORK EXPERIENCE

Lim See Heing Architect
Assistant Architect / January '19 - October '20

- Manage all aspects of a high-rise apartment project [handle authority matters, regular coordination meeting with clients / consultants]
- Preparation of drawings using **AutoCAD**
